Workshop Course Objectives :

Upon completion of this course, participants will be able to:

Fetal Medicine:

- Acknowledge the basic techniques & views of fetal echocardiography.
- Clearly understand the fetal circulation & normal cardiac structures by ultrasound.
- Recognize & identify fetal cardiac anomalies by ultrasound.
- Test their skills on fetal echo problematic cases.
- Review skeletal dysplasias by a step by step schematic approach.
- Learn basic protocols and anatomy of the fetus by MRI.
- Review normal fetal body & brain development by MRI, & recognize their various anomalies.
- Solve a variety of Quiz cases.

Breast Imaging:

- Use methods to reduce the number of false-negative and false-positive mammography interpretations.
- Outline the role of breast ultrasound in lesion evaluation and review the ACR lexicon.
- Understand the proper technique & role of ultrasound elastography in evaluating breast lesions.
- Know how to perform US Guided interventional breast imaging procedures, of nonpalpable lesions.
- Describe the current uses of full-field digital mammography and computer assisted detection.
- Recognize the indications, strengths and weaknesses of current breast MRI techniques & discuss the ACR lexicon for MRI of the breast.
- Describe how to incorporate MR-guided breast biopsy into a breast imaging practice.
- Reach a diagnosis by a schematic work up of problematic multimodality breast imaging cases.
- Test their breast cancer screening skills with digital mammography cases.
